

the code cooperative

- > Master computers.
- > Learn to code.
- > Build a website.
- > Join a community of technology creators.

The Code Cooperative facilitates prisoner reentry by teaching formerly incarcerated individuals valuable, practical, and applicable skills in computer literacy, technology, and programming. **Text, call, or email us to join our next class!**

.Program Details

Time Commitment

10 weeks starting on June 30, 2018

Class takes place on Saturdays from 11am to 5pm

Optional office hours on weekday evenings

Location

243 Canal Street, 6th Floor

New York, NY, 10013

No cost to students

Our program is completely free

We cover transportation costs if needed

.Curriculum Overview

The Code Cooperative empowers its students to take part in building the solutions to the problems that affect them. All of our students design, build, and release a website that aims to address a social issue of personal importance.

Over the course of the program, our students learn valuable, practical, and applicable skills in computer literacy, technology, and programming. They work with tech professionals to build a meaningful solution to a real problem and showcase their website at the end of program Demo Day.

With the goal of building and releasing a website, our students learn:

- > Essential computer and tech literacy skills
- > The fundamentals of programming, web development, and relevant technologies (HTML, CSS, and JavaScript)
- > Universal and applicable skills (problem solving and self-learning)
- > The role of empathy, humility, and resilience in the learning process

.Computer Access

Access to a computer and the Internet is crucial to learning to code, so each of our students receives a laptop for the duration of the program.

.Community & Mentorship

We believe that a supportive community is essential to learning. As such, we foster a diverse, collaborative, and engaged student community and connect our students with mentors from the tech industry to develop meaningful and lasting relationships.
